C/O Brent Robertson, Executive Director of Operations

To Brent Robertson, or to whom it may concern,

Environmental Inspection Services Pro LLC conducted a comprehensive lead-in-water testing episode at the subject Bandon School District (BSD) buildings listed above on August 18th, 2026. Alexin Analytical Laboratory received the one hundred fifteen (115) drinking water samples on August 21st, 2026, and analytical test results were reported to EIS on October 8th, 2026.

Fourteen (14) lead-in-drinking-water samples were noted above the 15ppb action limit:

Though not required, it is highly recommended that any fixtures testing above 10 ppb should also be addressed:

The EPA Maximum Contaminant Limit (MCL) for lead in public drinking water Systems is 15 parts per billion (ppb). The EPA action limit of 15 parts per billion (ppb) was utilized as the action limit for this water testing episode. This initial first-draw drinking water sampling episode was conducted immediately after eight (8) hours of stagnation. Samples were collected from cold-water sources only, using sterile, plastic 250 ml. bottles for the fixture sample collection.

A unique sample location code was assigned for each drinking water outlet sample. An alphanumeric sequence code was assigned to each sample. Example: The sampling code for sample No. 001 was as follows: 19690102-011CF26A (A Water sample collected from district 1969, Building No. 0102, sample No. 011, Classroom Faucet (CF), the year 2026, initial test: A.)

In the opinion of EIS, we recommend that all fixtures that tested over the 15-ppb action limit be replaced or immediately disconnected. If a fixture is replaced, it should be retested using the draw sample method. If a fixture is disconnected, it should be retested using the flush method to verify the source of contamination. Once the source has been identified, further action may still be recommended before the fixture may be reactivated for public use. Additionally, any fixtures tested above 10 ppb should be treated the same as those tested above the 15-ppb action limit, though not required by the ODE or the EPA. Thank you for this opportunity to be of service. If there are questions concerning the lead-in-water analytical test results, contact EIS at (503) 944-9818.

Respectfully submitted,
Environmental Inspection Services Pro LLC
